## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election of claims 10-13 in Paper No. 09/580,822 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by patent GB 1544260.

GB 1544260 discloses a method for sterilizing a pharmaceutical package wherein the package is placed in a sterilizing autoclave chamber **38** and the pressure and temperature is adjusted as a function of time. The pressure and temperature adjustments depend on the size and materials of the container to be sterilized. These pressure and temperature adjustments are controlled electronically by a control system **54**. (see page 1, lines 64-96 and page 2, lines 1-13 & 97-112)

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over GB 1544260 in view of EP 0322134.

GB 1544260 does not teach sterilizing a polypropylene bottle.

EP 0322134 discloses a method of packaging and sterilizing a pharmaceutical product. The pharmaceutical product to be sterilized is a polypropylene bottle and once the bottles are prepared for sterilization they are inserted into an autoclave. The autoclave serves the purpose of sterilizing the bottles. (see column 3, line 29 –column 6, line 12 and figures 1 and 2)

However, EP 0322134 does teach varying the pressure and temperature of the autoclave based on the size and materials of the object to be sterilized.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made sterilize polypropylene bottles in the autoclave of GB 1544260 because EP 0322134 teaches sterilization of polypropylene bottles in autoclaves.
